

## **EE8391 ELECTROMAGNETIC THEORY L T P C**

### **UNIT I ELECTROSTATICS – I 6+6**

Sources and effects of electromagnetic fields – Coordinate Systems – Vector fields – Gradient, Divergence, Curl – theorems and applications - Coulomb's Law –Electric field intensity –Field due to discrete and continuous charges –Gauss's law and applications.

### **UNIT II ELECTROSTATICS – II 6+6**

Electric potential – Electric field and equipotential plots, Uniform and Non-Uniform field, Utilization factor – Electric field in free space, conductors, dielectrics - Dielectric polarization – Dielectric strength - Electric field in multiple dielectrics – Boundary conditions, Poisson's and Laplace's equations, Capacitance, Energy density, Applications.

### **UNIT III MAGNETOSTATICS 6+6**

Lorentz force, magnetic field intensity (H) – Biot-Savart's Law - Ampere's Circuit Law –H due to straight conductors, circular loop, infinite sheet of current, Magnetic flux density (B) –B in free space, conductor, magnetic materials –Magnetization, Magnetic field in multiple media –Boundary conditions, scalar and vector potential, Poisson's Equation, Magnetic force, Torque, Inductance, Energy density, Applications.

### **UNIT IV ELECTRODYNAMIC FIELDS 6+6**

Magnetic Circuits - Faraday's law –Transformer and motional EMF –Displacement current - Maxwell's equations (differential and integral form) –Relation between field theory and circuit theory –Applications.

### **UNIT V ELECTROMAGNETIC WAVES 6+6**

Electromagnetic wave generation and equations – Wave parameters; velocity, intrinsic impedance, propagation constant – Waves in free space, lossy and lossless dielectrics, conductors- skin depth - Poynting vector – Plane wave reflection and refraction.

**TOTAL : 60 PERIODS**
